

IXcellerate data centres are a perfect choice for companies that need reliable and secure infrastructure that offers high connectivity and data rate.

Connectivity

Connect and
configure your connection as you like

Net neutrality

Our strategy is based on absolute neutrality: we provide no communications services, and our customers can choose any internet service provider they want.

Standard pricing policy for all customers.

Meet-Me-Room at every DC

Availability of several MMRs to set up provider equipment and space reservation.

All connection routes are redundant.

Connection versatility

The infrastructure of IXcellerate data centres is designed to accommodate any SCS [structured cabling system], no matter how complex.

The customer is assigned a distributed two-level tray system to set up his own SCS.

Redundant SCS at the DC for fast and reliable network connection.

Intra- and inter-campus connectivity

Fibre-optic cables link not only our DCs but both campuses too.

Availability of L1 and L2 links between campuses.

Access to major internet exchange points

Integration into the Eurasia Peering IX in-house platform

Availability of access to MSK-IX, Piter-IX or other peer-to-peer hubs.

Integration into MMTS-9

Direct connection to M9, a major intercarrier traffic exchange point in Eastern Europe.

Reservation of city service connections

Campus Vëshki IXcellerate

Each of IXcellerate's locations has two independent inputs from urban cabling systems. The inputs are more than 30 metres apart. The customer and the provider can provide cable connection redundancy both for municipal networks and within the data centre grounds.

IXcellerate's cable infrastructure makes it possible to set up cabling systems for providers on any scale.

North Campus IXcellerate

South Campus IXcellerate

Partners

Both IXcellerate campuses offer customers the widest range of communications providers, systems integrators, cloud service providers and peer-to-peer platforms. We are affiliated with over 50 communications service providers and 30+ cloud and CDN service providers.

An ecosystem of over 50 communications service providers

It unites not only CSPs, but also cloud providers, integrators, CDN and cybersecurity services
